<td>Regional conference of the speleological federation of Lazio</td>
<td>From 9 to 10 October 2021 the IX Conference of the Speleological Federation of Lazio was held in the Multimedia Room of the Municipality of Segni, entitled: “Signs in the Rock: karst and surroundings”. The theme of the event was the cave in the territory, analyzed through explorations, studies, experiences. In particular, all those interdisciplinary aspects that are closely related to the hypogean environment have been deepened. From geology, to biology, to the numerous disciplines related to them, up to research and documentation activities, as tools for the protection of the karst heritage. During the conference we tried to develop and spread a greater awareness among the local population, involving the municipality in a project on issues related to speleology. During the study days, interventions, exhibitions, and exhibition spaces were also planned thanks to the contribution of speleologists, geologists, archaeologists and anthropologists. Sunday 10 October, at the end of the event, it was possible to participate in the guided tour of the Colleferro air raid shelters.</td>
